AI Video Production Workflow

Photo to reference image to image-to-video: film camera and editing sequence

Step	Tool	Input	Output
1. Character reference	Google Gemini (image generation)	Group photo (4032 x 3024) + text prompt (section 1)	1024 x 768 JPG, single person, full body
2. Video generation	OpenArt AI (image-to-video)	Reference image as @image1 + text prompt	15.10 s MP4, 768 x 1344 (portrait), 24 fps, HEVC, AAC audio
3. Review	Manual check against prompt	Generated video	Adherence notes (section 5)

1. Character reference image (Gemini)

Verbatim Gemini prompt (sent together with the group photo):

```
remove all the prompt request cache done from before, and create the man in the middle, he should not be holding anything including the rubber glove, and needs to be facing upfront, without any other people or obstructions nearby him in a transparent background
```

Figure 1. Input: original group photo. The target is the man in the middle (front), holding a rubber glove.

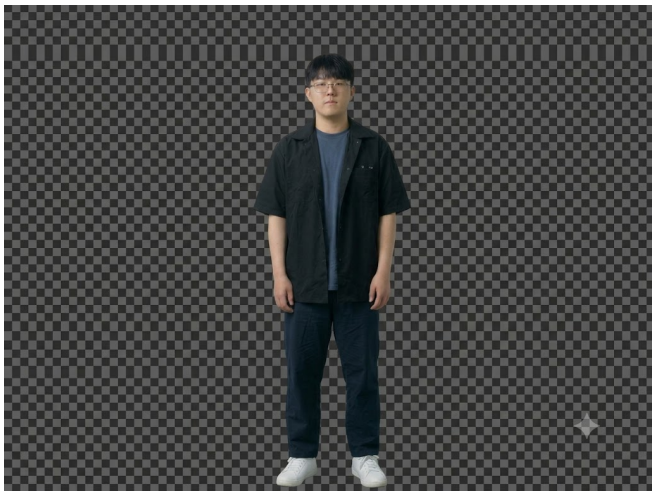

Figure 2. Output: isolated man, empty hands, facing front. Gemini sparkle mark visible bottom right.

Gemini instruction	Observed in output	Result
Only the man in the middle	Single person; the two masked people are removed.	Met
Not holding anything, incl. rubber glove	Both hands empty at his sides.	Met
Facing upfront	Frontal standing pose, full body.	Met
Transparent background	File is a JPEG in RGB mode with no alpha channel. The grey checkerboard is drawn into the pixels, not real transparency.	Not met
Likeness to source	Hairstyle, black short-sleeve overshirt and blue-grey T-shirt carried over. Glasses appear with thinner, lighter frames than the black frames in the photo; navy trousers and white sneakers are added (legs are not visible in the photo).	Met, with changes

2. Video prompt (OpenArt AI)

Verbatim text:

```
Create a video without background music, No background music, fixed camera,Use @image1 as a reference for the man's face and overall appearance and clothing,use the uploaded images exactly as provided, Make a video with one take camera, 0:00 ~ 0:05 The video begins with the man in @image1 holding a film camera, aiming directly at the screen, zoom into the camera lens, create lens flare transition. somebody says in a masculine voice "카메라 롤, 레디 액션" faintly in the background 0:06 ~ 0:11 shows a computer screen editing the video instance made in 0:00~0:05, and the person in @image1 editing it. 0:12~15, transition to fade to black,"
```

3. Prompt structure

Component	Instruction in prompt
Audio	No background music; masculine voice says 카메라 롤, 레디 액션 faintly in the background
Camera	Fixed camera, one take
Identity lock	@image1 for face, overall appearance and clothing; uploaded images used exactly as provided
0:00 to 0:05	Man holds a film camera aimed at the screen; zoom into the lens; lens flare transition
0:06 to 0:11	Computer screen editing the 0:00 to 0:05 clip, with the same man editing
0:12 to 0:15	Fade to black

4. Output breakdown (approximate timecodes)

Frames sampled from the output. Timings come from an ffmpeg scene-cut check and average brightness measured every 0.5 s.

0.5 s: aims film camera on tripod at viewer

1.5 s: crew members walk past in background

2.5 s: camera begins zoom toward lens

3.5 s: lens fills frame

4.5 s: lens flare peak (brightest point)

5.5 s: flare fading

6.04 s: cut to editing room; clip from scene 1 on monitor

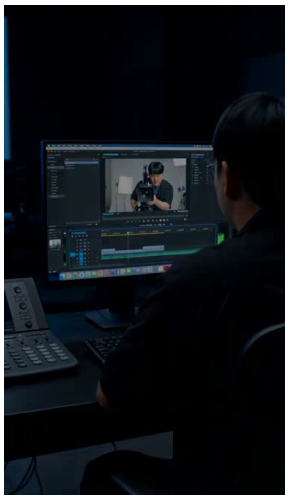

9 s: editing continues, seen from behind

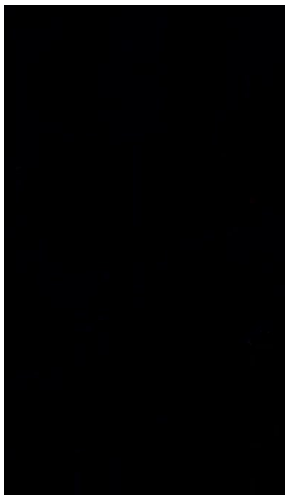

11 s: editing continues

12.5 s: fade starts

13.5 s: fading

14 s onward: black

5. Prompt adherence review

Instruction	Observed in output	Result
Face, appearance, clothing from @image1	Glasses, hairstyle, black overshirt, blue-grey T-shirt, navy trousers and white sneakers match the reference image.	Met
Holding a film camera aimed at the screen	Reel-type film camera on a tripod, lens pointed at the viewer, 0 to 2.5 s.	Met
Zoom into lens, lens flare transition	Zoom from about 2.5 s; flare peaks at about 4.5 s.	Met
Voice line 카메라 롤, 레디 액션	Confirmed by the creator: audible.	Met
Editing screen showing the 0:00 to 0:05 clip, man editing	Monitor shows the scene 1 shot in an editing timeline; man seen from behind at the desk, 6 to 12.5 s.	Met
Fade to black 0:12 to 0:15	Brightness drops from about 12.5 s and reaches black at about 14 s.	Met
No background music	Confirmed by the creator.	Met
One take	Hard cut detected at 6.04 s, after the flare has faded, rather than a continuous move into the editing room.	Not met
Fixed camera	The prompt also asks for a zoom into the lens, so the two instructions conflict. In the editing scene the framing shifts between samples.	Not met
Unrequested content	Crew members walk through the studio background around 1 to 2 s.	Addition

6. Source files

File	Role
Group photo (4032 x 3024 JPG)	Gemini input
image.jpg (1024 x 768)	Gemini output, used as @image1
OpenArt AI prompt (section 2)	Video prompt
KakaoTalk_20261021_184717051.mp4	Generated video, 15.10 s
